Tankmonitoring

Tankmonitoring: Data Management Program for Level Gauging Systems

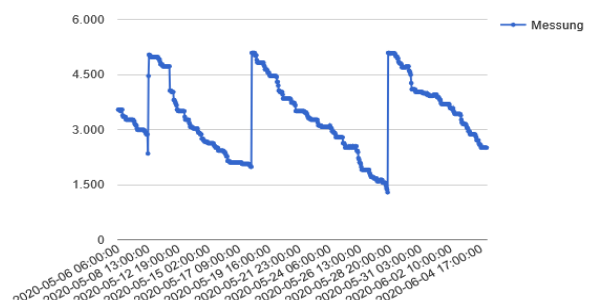

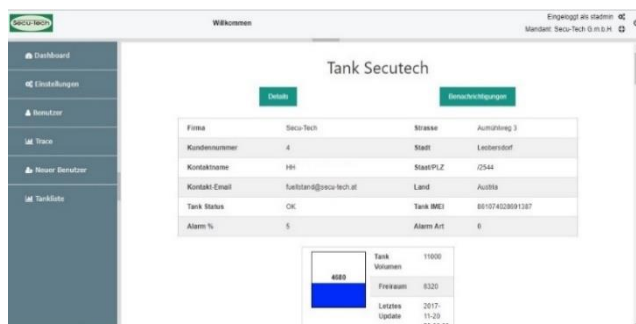

Tankmonitoring

Tankmonitoring provides a central web-based data management platform that receives tank level information from various sources and evaluates them. The data is visible in one platform in a graphically prepared form.

Applications:
- Monitoring of one or more tanks
- Level monitoring
- Temperature monitoring possible
- Battery status monitoring
- Tanks shown on a digital map
- Can be used for route plannings

Advantages:
- Representation of all tanks in one network
- Data from different SECU-TECH level gauges in one platform
- Connection of third-party-devices possible
- High- and low- level alarms can be set/ Email alarms
- Multiple users can be set according to a hierarchy system
- In the dashboard, a total of products from different tanks is visible
- For battery powered level sensors, the battery status can be displayed
- Display of the data history
- Integration of tank tables to reach a higher accuracy

Product Information

Tankmonitoring

Sensors supported by Tankmonitoring:

- **Ultrasonic measurement:**

ECO-MAT   LC 200   LC201

- **Hydrostatic measurement:**

SECU Tank DATA GSM   SECU Tank QUATTRO GSM   DeltaBlue

- **External devices can be connected and integrated**
